- E-commerce covers online transactions; e-business covers the whole digital value chain
- Key models: B2B, B2C, C2C, O2O and platform business
- Network effects: value grows with the number of users
- Long-tail economics enabled by digital shelves
- Case: platform companies and two-sided markets

- Portal, e-tailer, content provider, transaction broker
- Market creator, service provider, community provider
- Revenue models: advertising, subscription, transaction fee, affiliate
- Crowdsourcing and the sharing economy
- Metrics: conversion rate, churn, customer lifetime value (CLV)

- ICT accounts for a growing share of global energy use
- Green IT: efficient hardware, virtualization, cloud consolidation
- Green IS: using information systems to enable sustainable business
- Caching and incremental processing reduce redundant computation
- Sustainable software engineering: measure, then optimize

- Pick one e-business model and one database concept from Lecture 01
- Explain how the database supports the business model
- Identify one sustainability risk and one mitigation strategy
- Submit a one-page outline before the seminar
